

(a) CRANE platform: ASV navigation evidence

One evidence boundary; two explainers

B2 • tool-enabled LLM agent

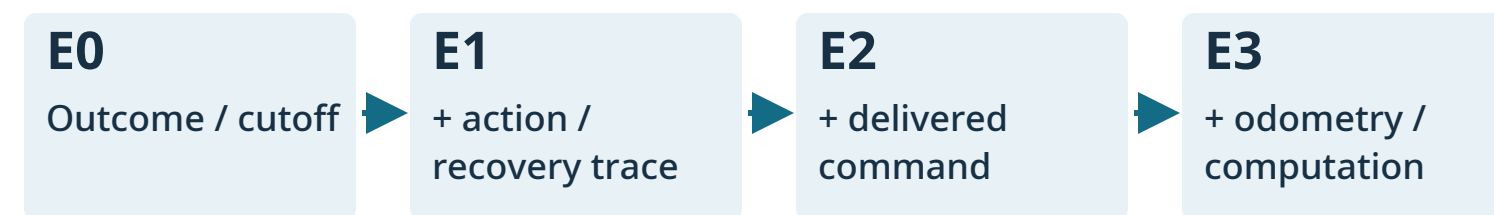

Visible evidence + source/configuration
Permitted diagnostic computations
Natural-language answer returned verbatim

B4 • diagnostic-contract method

Same visible evidence and source access
Maximal supported diagnosis
Constrained clauses + exact numeric slots
Final claim verification

ASV illustration; results below: land/Nav2.
Physical truth is evaluator-only.

(b) Same episode, nested evidence

Evidence removed: E3 to E2 to E1 to E0.

Commands + measured motion justify discrepancy,
not a unique motor, collision, or obstruction cause.

(c) Episodes flagged by evidence level
